Summary

E-commerce professional who uses AI to find operational problems and build the systems that solve them. Has built a GTIN-to-product builder, a competitor intelligence platform and a 30-40K-term search audit at Harvey Norman Ireland, alongside a live Shopify migration. Strength is framing the problem, choosing where AI helps, and shipping something that people actually use.

Skills

AI and automation: AI-assisted development, LLM workflows, API-driven audits, scraping and data normalisation, workflow design

Business: E-commerce operations, platform migration, catalogue and search quality, stakeholder delivery, training

Tools: Shopify, Python, GA4, Excel, HTML/CSS/JavaScript

Experience

Assistant E-commerce Merchandiser, Computers & Electronics

Dublin, Ireland

Harvey Norman

Jan 2026 – present

- Use AI every day to solve operational problems, then turn the fix into a working system: Product Builder, a search audit and an image standardiser now run inside Harvey Norman's content workflow.
- Built Product Builder, which turns a GTIN into a Shopify-ready product (finds source content across countries, flags green/yellow matches for review, builds to the store's category style; 30-50 products per run), plus an image standardiser for catalogue images.
- Tuned on-site search relevance against 7,000+ queries on a store handling 3M+ weekly sessions; built an API-driven search audit that scores 30-40K search terms at once for product and category accuracy.
- Core contributor to Project Midnight, the migration of the retail site from Shopfront to Shopify: audited the site, ran UI/UX and search testing and supported system optimisation while the live site kept trading.
- Led 2026 launches across Samsung (S26 range), Apple (iPhone 18 series), Google (Pixel, Googlebook), Galaxy Tab S12 and wearables. The Samsung S26 launch generated close to EUR 20K in its first 42 hours, and the iPhone 18 launch about EUR 1.1M in its first 42 hours.

Account Manager, E-commerce & SEO

Dublin, Ireland

Castle Kevin Digital

Jan 2025 – May 2025

- Revamped the agency's website on WordPress, from full audit through wireframes, page layouts and content.
- Ran front-end, back-end and technical SEO with Search Console and GA4, lifting organic traffic 34% and lead submissions 17%.
- Audited an e-commerce client's site and wrote optimised product descriptions across 150+ SKUs.

Marketing Communications Specialist

Mumbai, India

Nano Quinn

June 2023 – May 2024

- Developed growth strategy for a B2B nanotechnology brand; an SEO overhaul moved rankings from page 30 to the top 3 within a month.
- Ran Google Ads and SEO lead generation producing 5-6 qualified B2B leads a day, including enterprise accounts such as Indian Navy, Asian Paints, Tata Steel and Reliance Industries.
- Launched the e-commerce pipeline for new product launches (Surface Cleaner) through Amazon, Blinkit and Zepto.

Projects

Hawkeye, competitor intelligence platform (self-built)

Jan 2026

- Built a competitor monitor that tracks price changes, promotions and launches across very different websites (custom adapter per site for different platforms, anti-bot set-ups and data formats) into one live dashboard; designed to replace a five-figure annual subscription.

Product Builder (self-built)

Jan 2026

- Problem: high-volume launches need consistent, fast product builds, and source content often exists only on overseas sites. Approach: GTIN lookup across countries, green/yellow confidence flags, category-aware build, custom reference override, import-ready file.

Education

Dublin City University <i>MSc in Digital Marketing</i>	<i>Dublin, Ireland</i> <i>Sept 2024 – Sept 2025</i>
